Siehe unsere Website: www.atmosa.at

Atmosa was established in May 1995 by the Taiwanese Dahin Group after the acquisition of the PA plant from Chemie Linz, a former affiliated company of OMV.

The production capacity had been increased in the following two years after making a considerable investment and Atmosa has become an important PA producer in Europe.

In the meantime Atmosa has built a turbine generator to produce electricity from steam for its own needs.

Thanks to its central location in Europe Atmosa is able to deliver PA products to all over Europe.

Mr. Kevin Liu has been the managing director since the company was founded.
